The three main types of the web are:

1. **Static Web**
   - Consists of fixed HTML pages that do not change unless manually edited.
   - Suitable for simple websites like informational pages.
   - Fast and secure but not interactive.

2. **Dynamic Web**
   - Uses databases and programming languages like PHP and JavaScript.
   - Allows user interaction, such as login systems and comments.
   - Used in social media platforms and e-commerce websites.

3. **Hybrid Web**
   - Combines static and dynamic elements, where some content remains fixed while other parts update automatically.
   - Used in blogs and news websites that require frequent updates while keeping certain pages static
